

Please fill in your name and student ID in the table below.

<b>Student Name</b>	
<b>Student Number</b>	
<b>Course and Year</b>	2022/2023
<b>Module Code</b>	CMP4266
<b>Module Title</b>	Computer Programming
<b>Module Leader</b>	Dr. Ogerta Elezaj
<b>Assessment items:</b>	<p>3. Computer programme solution and testing (<b>Total weight 50%</b>). This must include the following parts;</p> <p><b>A.</b> Design documentation submitted online (<b>Weight 10%</b>). This must include the two flow chart diagrams.</p> <p><b>B.</b> Programme source code submitted online (<b>Weight 30%</b>).</p> <p><b>C.</b> Testing and evaluation inclusive of test cases submitted online. (<b>Weight 10%</b>).</p>

You are required to complete this software implementation checklist for the Hospital Management System developed in Python. You should select only the features that were implemented in your code.

You can select all/some features from the same marking range as long as they have been implemented in the code submitted for this assessment. For example, you can select all/some features from the marking range 40%-50% and all/some features under the range 70%-79% etc. However, it is very important to complete/attempt all functionalities within the current grade before moving to the next one. **Failure to do so indicates you have not understood the requirements and it will greatly affect the marks you gain by completing the functionalities from higher grades.**

This implementation checklist should be submitted alongside the implementation source code of the system and the testing and evaluation documentation.

**Important notice:** This checklist will assist the lecturer when marking your code, hence, you should only select the feature requirements that have been implemented in your code. Even if some features are not working correctly, you can still select them as long as there is evidence in your code showing the implementation attempt. However, it is not acceptable for a student to claim the implementation of features that were not attempted/implemented in the system.

**False claims is a clear indication that the student does not understand the submitted code, hence, the submission will be investigated further for plagiarism**, and the lecturer marking the assessment may invite the student to explain all/parts of the submitted code.

## Software implementation checklist (**Compulsory, for Part B**).

### Achieving a mark to maximum of 40%

The application **must** implement **all** the above and the following:

**Create the necessary classes and functions which allow Admins to perform the following tasks:**

1. Admin Login	<input checked="" type="checkbox"/>
2. Register/view/update/delete doctor	<input checked="" type="checkbox"/>
3. View patient	<input checked="" type="checkbox"/>
4. Can assign doctor to a patient	<input checked="" type="checkbox"/>

### To achieve a mark of 41% to maximum of 50%

The application **must** implement **all** the above and the following:

5. Discharge a patient account i.e. remove patient from the system	<input checked="" type="checkbox"/>
6. Admins can view the discharged patient list	<input checked="" type="checkbox"/>
7. Update admin own information i.e. name and address	<input checked="" type="checkbox"/>

### Achieving a mark of 51% to maximum of 70%

The application **must** implement **all** the above and the following:

8. Patients have names, symptoms, age, mobile, address etc.	<input checked="" type="checkbox"/>
9. Patients of the same family are grouped together by Admin	<input checked="" type="checkbox"/>
10. The hospital system should be able to store and load all patients' data from and into a file	<input checked="" type="checkbox"/>

### Achieving a mark of 71% to maximum 80%

The application **must** implement **all** the above and the following:

11. Relocating patients from one doctor to another	<input checked="" type="checkbox"/>
12. Admins can request a management report. This should show the following information;	<input checked="" type="checkbox"/>
a) Total number of doctors in the system	<input checked="" type="checkbox"/>
b) Total number of patients per doctor	<input checked="" type="checkbox"/>
c) Total number of appointments per month per doctor	<input checked="" type="checkbox"/>
d) Total number of patients based on the illness type	<input checked="" type="checkbox"/>

### To achieve a mark of 80% and over

The application **must** implement **all** the above and the following:

13. View diagrams of the reports from a, b, c, and d.	<input type="checkbox"/>
14. Development of a suitable Graphical User Interface (GUI) to perform all the above functions.	<input type="checkbox"/>

**Note:** students need to submit their system alongside the necessary objects to test their software by the tutors when marking.
